♦ Give users ability to quickly access critical information

♦ Can be tailored for any specific needs.

Oracle Services to Review:

♦ General Ledger
♦ Payables
♦ Receivables
♦ Procurement
♦ User License Consumption
♦ More…

Overview

The ability to quicky access and analyze data in your system is key to making good business decisions. However, users often spend more time trying to pull together data from various sources than they do analyzing the data. While Oracle gives you all the necessary tools to create robust reports and analytics, the process of creating that content can be long, tedious, and costly.

Through years of Cloud implementations, C3 has developed several key reports that we can quickly deploy in any Oracle Cloud ERP instance. These pre-built reports span across many of the Oracle modules and can be refined to meet your needs. Some of our most popular reports are:

- AP Metrics Dashboard with drilldowns to transaction to view invoices, payments and spend by supplier
- AP/AR Aging reports with improved Excel and export functionality
- Multi-Period Accounting for visibility to recognition
- General Ledger Account Analysis for viewing transactions' account combinations
- Bank Statement to reconcile invoices to bank information
- Supplier/Customer listing to for viewing details
- License Reports to identify roles/users consuming licenses

Key Features

- Quickly deploy pre-built reports and analytics
- Reports with drill down capabilities to source transaction
- Link key reports to home screen or navigator
- Quickly tailor for any unique needs
- Select from a growing report repository

Prerequisites:
- You are currently using, or plan to implement, Oracle ERP Cloud.
